浏览：1153 !!!乖乖!!!我的神……

简单的日历表写法是什么样的？

```
??add(27);
```

```
links。add(30);
```

```
// 采用当月的方式进行构造，现在是 2008 年 7 月
```

```
Nil2000 nil = new Nil2000(links);
```

```
System。out。println(nil。toString());
```

```
class Nil2000 {
```

```
* 生成日历的 Calendar
```

```
private Calendar calendar;
```

```
* 有链接的日期
```

```
private List links;
```

```
private static String TABLE_START = "\n";
```

```
private static String TABLE_END = "\n";
```

```
private static String TR_START = " \n";
```

```
private static String TR_END = " \n";
```

```
private static String TD_START = " ";
```

```
private static String TD_END = "\n";
```

```
private static String TD_BLANK = TD_START + " " + TD_END;
```

* 链接字符串的常量，需要将 {0} 替换成指定字符串

```
private static String LINK = "{0}";
```

* 构造当月的日历

* @param links 需要带有链接的日期

```
public Nil2000(List links) {
```

```
this(Calendar.
```
